**A STUDY OF ACADEMIC PERFORMANCE OF SECONDARY
SCHOOL STUDENTS**

Manowar Faruk

Research Scholar, Ph. D. in Education, , Mansarovar Global University, Billkisganj, Sehore, M.P.

ABSTRACT

The academic performance of secondary school students is a critical indicator of their future educational and career prospects, influenced by a variety of interconnected factors. Individual motivation, study habits, and cognitive abilities are foundational elements determining success. Additionally, external factors such as the quality of teaching, availability of resources, and parental involvement significantly impact student outcomes. Socioeconomic status can also play a crucial role, as students from disadvantaged backgrounds may face additional challenges such as limited access to educational materials and extracurricular support. Furthermore, emotional and mental health issues, often exacerbated by stress and peer pressure, can impede academic progress. Comprehensive strategies that address both in-school and out-of-school influences are essential to enhance academic performance, ensuring that all students have the opportunity to achieve their full potential.
